

박수민_0611_LED 과제 3,4번

3,4) led_flower_on, led_flower_off

main.c

```
#if 1
int main(void)
{
    int button0_state=0;    // 초기 상태를 led all off로 출발 하자

    init_button();
    init_led();

    led_main();

    while (1)
    {
        // toggle off <--> on
        if (get_button(BUTTON0, BUTTON0PIN))
        {
            button0_state = !button0_state;    // 반전 0 <--> 1
            if (button0_state)
                led_all_on();
            else led_all_off();
        }

        if (get_button(BUTTON1, BUTTON1PIN))
        {
            button0_state = !button0_state;
        }
    }
}
#endif
```

led.c

```
void led_flower_on()
{
    for (int i=0; i<4; i++)
    {
        PORTA |= (1 << (4 + i)) | (1 << (3 - i));
        _delay_ms(300);
    }
}

void led_flower_off()
{
    for (int i=0; i<4; i++)
    {
        PORTA &= ~(1 << (7 - i)) | (1 << i);
        _delay_ms(300);
    }
}
```
